Dear Author,

I am happy to tell you that we received the feedback for your manuscript. I attach here two documents from Reviewer 1 and two documents from Reviewer 2. Each contains the reviewer's comments. Please read all attached documents.

Please answer to the comments in the form that I attach to this email and also write a revised version of your manuscript in which you incorporate the revisions requested by the four reviewers. If you choose not to follow some of the recommendations/ comments, please motivate your choice.

In conclusion, please send me three documents:

1. The revised version of the manuscript, with track changes visible for all your revisions;
2. A clean copy of the revised version;
3. The document "Answers to reviewers" which contains your answers to all reviewers and to all their comments (included in "A" documents and "B" documents).

Also, I would appreciate it very much if you could use a **reference manager** (Mendeley, Zotero or other). Use the **American Psychological Association (APA) 7th edition (author-date) style for references**.

Have you used a reference manager so far? If yes, great! If not, I would like to say that it is extremely useful. I am sure that if you start using it, you will continue because it saves a lot of time and it is very efficient in relation to the organization of the references.

For example, Zotero is a free program. You can download it from here: <https://www.zotero.org/download/>

There are many video tutorials that show you how to use it. However, if you need, I can help you. After you install Zotero on your computer, you can download the American Psychological Association 7th edition (author-date) style from here: <https://www.zotero.org/styles?format=author-date>.

Also, please check the entire document with an **English editor program**, for example, Grammarly or Writefull.

Could you, please, let me know how much time (days or weeks) you need to revise the manuscript?

Kind regards,
Crina Petrescu,
Editor - Bioflux Journals

Dear Dr. Emmy Lilimantik,

Please send me 3 documents:

- 1 document that contains all changes as a result of revising the original manuscript according to all reviewers' comments
- 1 clean copy (this means with all changes accepted)
- 1 table with all answers

Thank you.

Kind regards,
Crina Petrescu

Dear Author,

You have sent me the wrong files. Please send me:

- 1) Only 1 (ONE) document with ALL revisions to ALL comments (from all reviewers) in it, in the same file.
- 2) Only 1 (ONE) CLEAN copy. A clean copy is the version where all changes are included but they do not have a different color. They are incorporated in the manuscript and they look like the published version.

Kind regards,
Crina Petrescu

Dera Author,

Thank you for the file.

There is a comment to which you did not respond. So, please send me the following information:

- How did you select the random sample (fish farmers)? Explain step by step.

Thank you.

Kind regards,
Crina Petrescu

Dear Editor Bioflux Journal

Here are the explanations regarding the sample selecting for this research :

In Banjar Regency, there is one area that specializes in cultivating catfish called the "minapolitan" of striped catfish. In this area there are 330 fish farmers who cultivate striped catfish. Because the population of fish farmers is homogeneous, the research sample has been represented by taking 10% randomly from the total sample as a whole (West, PW., 2016).

These are the steps about select the random sample (fish farmers) :

1. Check the state of the population list (Total Fish farmers who cultivate striped catfish are 330)
2. Set the interval ($I = N/n + (330/33) = 10$ intervals).
3. Assign a number (the determination of this first number is done randomly), ex: 1
4. The next sample member is determined by adding the interval to the first number and so on

1,11,21,31,41,51,61,71,81,91,
101,111,121,131,141,151,161,171,181,191,
201,211,221,231,241,251,261,271,281,291,
301,311,321 = 33 samples.

In this study, I added 1 sample so that the sample of fish farmers are 34 people, to anticipate the occurrence of sample error in filling the questioner or the lack of data when I analyze the data.

Best Regards,

Emmy Lilimantik

Sun, Oct 31, 2021 at 7:46 PM

Dear Emmy Lilimantik,

I am asking how you "selected", how you met those farmers, how you found them for the interview, etc.

Mon, Nov 1, 2021 at 5:31 PM

Dear Emmy Lilimantik,

Thank you for the details.

I made several adjustments (see the part in yellow). West (2016) does not say anywhere in the paper that then 10% of the population can be used as a sample (West 2016). Therefore, I deleted the reference: West P. W., 2016 Simple random sampling of individual items in the absence of a sampling frame that lists the individuals. New Zealand Journal of Forestry Science 46(15):1-7. And also Carson. Also, 34 is a small number and cannot be considered a representative sample.

Please check the attached version and let me know if you agree.

Kind regards,
Crina Petrescu
