Prof. M.S.M. Kumar (India)	Dr. R. Jia (China)

## Preface

The International Symposium on Lowland Technology has been held biennially from 1998 and we reached the 9th meeting at ISLT2014. During the last 18 years, most were held in Saga, Japan. However for this decade it was held in Bangkok, Busan and Bali in 2004, 2008 and 2012, respectively.

When this event was held in attractive cities outside Japan, many participants in the symposium enjoy the atmosphere and ambience of these cities as well as deepen their knowledge on issues involving Lowland. Saga is also still one of typical lowlands in the world, however, touching different features in other lowland areas are also very interesting and informative. Especially, comparing to previous symposium in Bali 2012, that collected 160 papers from 17 countries, the ILMR local organizing committee made great effort for the preparation of the symposium so that we will obtain the result as good as Bali. Finally and fortunately, a total of 130 papers from 11 countries are published in this proceedings.

On average, around 120 papers have been constantly submitted to every past ISLT. It means that many researchers and engineers are interested in lowlands. Furthermore, the term of “lowland” is becoming popular and increasingly has more significant meaning in the era of climate change. Following the same direction, the official journal of IALT, Lowland Technology International, also continues to develop with expanding fields of (i) Geotechnical/Geoenvironmental Engineering, (ii) Water/Environmental Engineering, (iii) City/Urban Planning and Management, (iv) Coastal Science and Engineering and (v) Remedial Measures for Lowland Management.

Those academic publications had played important role in the development of academic disciplines concerning lowlands and thus are essential activities. I hope ISLT2014 in Saga will successfully give fruitful outcome and contribute knowledge to all the participants.

Prof. Hiroyuki Araki  
Chairman of Organizing Committee  
ISLT 2014 Saga

## President's Address

It gives me immense pleasure to welcome all to the 9<sup>th</sup> International Symposium on Lowland Technology at Saga University, Saga. This symposium follows after the very successful ones at Saga, Busan, Bangkok and Bali. All of us have very fond memories of the very fruitful 8<sup>th</sup> Symposium in the picturesque resort in Bali. The current one also promises to be equally valuable if not more with more than hundred papers accepted and included for presentation.

ISLT showcases the progress and developments in the field of Lowland and Marine Research with the theme '**Problems and Remedial Measures of Lowlands**' under various topics such as (i) Geotechnical/Geoenvironmental Engineering, (ii) Water/Environmental Engineering, (iii) City/Urban Planning and Management, (iv) Coastal Science and Engineering and (v) Remedial Measures for Lowland Management. More than hundred papers have been received, accepted for publication and presentation. ISLTians can thus look forward to an update on various topics during the Symposium Sept. 29<sup>th</sup> to Oct. 1<sup>st</sup>, 2014 in the home grounds of Saga University, the fount for the genesis, nurturing, developing and spreading the knowledge in this area.

It should be noted that nearly twenty five years after the topic is identified for study, the International Society of Soil Mechanics and Geotechnical Engineering is now proposing to have a new Technical Committee on 'Land Reclamation'. I have always felt that just as humans give birth to life and nurture the baby/infant to life, we at IALT, ILMR and erstwhile ILT have been working diligently to create land and making it functional with all attendant concerns in terms of improving the ground, water, environmental, city/urban planning, coastal and sustainability issues.

While remembering the creators and sustainers of IALT, Prof. Miura, Prof. Poorooshab, Prof. Hayashi, Prof. Kim, etc. we all should compliment the present team of Prof. Araki, Prof. Bergado, Prof. Yamanishi, Prof. Hino, Dr. Azizul, Dr. Suman, Dr. Lam and several others for their untiring efforts to make this Symposium a success. Ms Mariko Yahiro, the ubiquitous worker behind the scenes, is a great asset to all our efforts.

Wishing the Symposium a great success with all your presence and participation and looking forward to meet you,

M R Madhav  
President, IALT

## List of Reviewers

The Editors would like to thank the following individuals for their assistance in refereeing submitted papers for ISLT 2014

Prof. H. Araki	Prof. D.T. Bergado
Prof. K. Koga	Prof. T. Hino
Prof. H. Yamanishi	Prof. J.C. Chai
Prof. K. Ohgushi	Prof. F. Ahmad
Prof. C.H. Koh	Prof. N. Mishima
Prof. M.S. Mohan Kumar	Prof. J. Ge
Dr. N. Vongthanasunthorn	Prof. H. Obiya
Dr. Y. Mishima	Prof. R. Goto
Dr. W. Liengcharernsit	Dr. Y. Taguchi
Dr. S. Karnchanawong	Dr. P. Iamtrakul
Dr. O.A.C. Hoes	Dr. D. Suetsugu
Dr. N.C. Don	Dr. T. Negami
Dr. S. Leungprasert	Dr. S. Manandhar
Dr. S. Sirivithayapakorn	Dr. L.G. Lam
Dr. C. Soralump	Dr. M.A Moqsud
Dr. P.I. Rerkrai	Dr. S. Pongsivasathit
Dr. T. Inohae	Dr. T. Harianto
Dr. T. Nagaie	Dr. R. Jia
Dr. T. Kinashi	Dr. J. Saowapakpiboon
Dr. W. Daungthima	Dr. T. Tanchaisawat
Dr. U. Shummadtayar	Dr. S. Artidteang

# CONTENTS

## MIURA LECTURE

MIURA LECTURE <i>F.H.M. Van de Ven</i> .....	1
WATER AND CLIMATE RESILIENCE OF LOWLAND CITIES <i>F.H.M. Van de Ven</i> .....	2

## KEYNOTE LECTURES

WATER QUALITY MODELING FOR WATER MANAGEMENT -INVITATION TO INTEGRAL APPROACH- <i>K. Koga</i> .....	5
THE FORMATION OF CONCEPTUAL FRAME AND RESEARCH REVIEW OF ASIAN SUSTAINABLE CITY <i>K. Hokao</i> .....	12

## SPECIAL LECTURES

ASSESSMENT OF THE EFFECTS OF SEA-LEVEL CHANGE ON THE GEOENVIRONMENT: THE CASE OF THE ARIAKE SEA COASTAL LOWLANDS <i>T. Hino, J.C. Chai, T. Negami, D.T. Bergado and R. Jia</i> .....	21
CHANGES IN SUSPENDED SOLIDS IN THE RESERVOIR OF THE ISAHAYA BAY RECLAMATION PROJECT UNDER THE CONTINUOUS SEAWATER INFLOW <i>N. Vongthanasunthorn, Y. Mitsugi, S. Nagase, P.I. Rerkrai, Y. Mishima, K. Koga, H. Araki and H. Yamanishi</i> .....	31

## PART 1

## GEOTECHNICAL AND GEOENVIRONMENTAL ENGINEERING

### CHAPTER G1: ANALYTICAL METHODS AND NUMERICAL SIMULATIONS

NUMERICAL MODELING INVOLVING BACKFILL GROUTING EFFECTS FOR SEGMENTAL TUNNEL <i>L.G. Lam, H.N. Thi, M. Sugimoto, T. Hino and D.T. Bergado</i> .....	37
MODEL TESTING AND NUMERICAL SIMULATIONS OF FLOATING TYPE CEMENT- TREATED COLUMNS DURING CONSOLIDATION SETTLEMENT <i>Z. Jiang, R. Ishikura and N. Yasufuku</i> .....	42
NUMERICAL STUDY ON LATERAL MOVEMENT PATTERN OF BEARING REINFORCEMENT EARTH (BRE) WALL <i>C. Suksiripattanapong S. Horpibulsuk, J.C. Chai, S.L. Shen and A. Arulrajah</i> .....	50
NON-LINEAR ANALYSIS OF DISPLACEMENTS OF GRANULAR PILE ANCHORS (GPA) IN NORMALLY CONSOLIDATED GROUND <i>B. Vidyaranya and M.R. Madhav</i> .....	57
ANALYTICAL SOLUTION TO SOIL FLUSHING THROUGH GEOTEXTILE CONSIDERING CLOGGING <i>H.Y. Wang, X.W. Tang, P.L. Gan and B. Niu</i> .....	65

ANALYSIS AND SIMULATIONS OF FLOOD CONTROL AND EROSION PROTECTION DESIGNS USING THE PLAXIS 2D AND SLIDE PROGRAMS <i>N. Chanmee, D.T. Bergado, T. Hino and L.G. Lam</i> .....	71
PREDICTION OF SETTLEMENT INDUCED BY MULTI-DIRECTIONAL CYCLIC SHEAR FOCUSED ON PLASTICITY INDEX OF SOFT CLAY <i>Y. Sueyoshi, H. Matsuda, H. Hara, K. Nakahara and T.T. Nhan</i> .....	79
NUMERICAL SIMULATIONS USING FEM 2D COMPARED TO FEM 3D AND OBSERVED BEHAVIOR OF REINFORCED FULL SCALE EMBANKMENT <i>S. Shrestha, P. Baral, D.T. Bergado, J.C. Chai and T. Hino</i> .....	85

## CHAPTER G2: PROPERTIES OF SOILS

STUDIES ON ENGINEERING PROPERTIES OF LITHOMARGIC CLAYS OF COASTAL KARNATAKA IN INDIA <i>R. Shivashankar, A.U. Ravi Shankar and J. Jayamohan</i> .....	93
DEPOSITIONAL ENVIRONMENT AND GEOTECHNICAL PROPERTIES OF SHANGHAI CLAYS IN COMPARISON WITH ARIAKE AND BANGKOK CLAYS <i>G.L. Ye, C.J. Wu and Y.L. Yu</i> .....	101
EVALUATION OF HYDRAULIC CONDUCTIVITY OF SOFT DEPOSIT BASED ON PIEZOCONE TEST <i>J.P. Wang, S.L. Shen, J.C. Chai and Y.S. Xu</i> .....	108
CHARACTERIZATION OF PEAT IN NORTHERN MANITOBA, CANADA <i>E.M.B. De Guzman and M.C. Alfaro</i> .....	113
CONSOLIDATION BEHAVIOR OF SATURATED MARINE CLAY UNDER CYCLIC LOADING <i>Y. Kuno, A.T. Tran, H. Hara and H. Matsuda</i> .....	120
ANISOTROPIC CONSOLIDATION BEHAVIOR AND MICROSTRUCTURE OF ARIAKE CLAY <i>K. Aiga, J.C. Chai and T. Negami</i> .....	125
THE POST-DEPOSITIONAL ENVIRONMENTAL CHANGES OF ARIAKE CLAY IN SAGA PLAIN <i>R. Jia and T. Hino</i> .....	131
CYCLIC BEHAVIOR OF MARINE SILTY SAND SUBJECTED TO LONG TERM LOADING <i>J.M. Kim, S.W. Son, T.K. Ryu, S.H. Park and G. Soriano</i> .....	137

## CHAPTER G3A: SOIL/GROUND IMPROVEMENT A

STRENGTH INCREASE OF SOFT CLAY UNDER EMBANKMENT LOADING IN YUHUAN, CHINA <i>H.N. Wu, Y. Yuan, S.L. Shen and Y.S. Xu</i> .....	144
LABORATORY TESTS ON THE INFLUENCE OF SOIL DISTURBANCE ON THE MATERIAL PROPERTIES OF CEMENT-TREATED SOIL <i>M. Makino, T. Takeyama and M. Kitazume</i> .....	150
LABORATORY MODEL TESTS OF THE EFFECT OF DECREASE IN PERMEABILITY OF VERTICAL DRAIN ON CONSOLIDATION BEHAVIOR <i>T. Tsuyoshi, T. Takeyama and M. Kitazume</i> .....	156

CENTRIFUGE MODEL TESTS ON EMBANKMENT ON SOFT CLAY GROUND SUBJECTED TO DREDGED SOIL PRESSURE <i>Y. Otake, T. Takeyama and M. Kitazume</i> .....	163
PROGRESS SPEED OF DETERIORATION OF CEMENT AND LIME TREATED SOIL IMMERSSED IN SEAWATER <i>H. Hara, D. Suetsugu and H. Matsuda</i> .....	169
UTILIZATION OF SUGARCANE BAGASSE ASH IN PEAT STABILIZATION <i>M.K. Abu Talib, N. Yasufuku and R. Ishikura</i> .....	174
SHORT TERM DURABILITY OF CEMENT STABILIZED SANDY SOIL UNDER SEAWATER ENVIRONMENT <i>R. Ishikura, N. Yasufuku , T. Kono and R. Kurokawa</i> .....	181

### CHAPTER G3B: SOIL/GROUND IMPROVEMENT B

NUMERICAL STUDY ON DYNAMIC BEHAVIOR OF COLUMNAR VERSUS LATTICE-SHAPED GROUND IMPROVEMENT <i>S.S. Lin, C. J. Chien, C.C. Yang and H.C. Lai</i> .....	188
COMPRESSIVE STRENGTH DEVELOPMENT OF CLAY-FLY ASH GEOPOLYMER <i>P. Sukmak, S. Horpibulsuk and C. Suksiripattanapong</i> .....	196
A STUDY ON THE EFFECT OF SALT ON THE BEHAVIOUR OF COMPACTED BENTONITE <i>A.K. Mishra and J. Dutta</i> .....	205
SWELLING CHARACTERISTICS OF EXPANSIVE SOILS IMPROVED WITH CEMENT AND FLY ASH <i>P. Voottipruex, P. Jamsawang, S. Kamkoontod and S. Intapichai</i> .....	211
SOIL CEMENT MIX DESIGN TEST FOR URGENT DISASTER REDUCTION OF MT. BAWAKARAENG, INDONESIA <i>T. Harianto, S.H. Nur, I. Maricar, A.A. Amiruddin and Masriflin</i> .....	218
AN OVERVIEW ON THE FACTORS INFLUENCING THE COMPRESSIBILITY CHARACTERISTIC OF CEMENT-BENTONITE MIXTURE SLURRY SAMPLES <i>M. A. Walenna, and L. Samang</i> .....	224
MODEL TEST OF THE TIMBER RAFT AND PILES COMPOSITE FOUNDATION COMBINED WITH THE VERTICAL DRAIN <i>J. Sasaki, D. Suetsugu and S. Manandhar</i> .....	231

### CHAPTER G3C: SOIL/GROUND IMPROVEMENT C

A NOVEL GREEN CONSTRUCTION MATERIAL FROM WATER TREATMENT SLUDGE <i>S. Horpibulsuk, C. Suksiripattanapong, P. Chanprasert, P. Sukmak and A. Arulrajah</i> .....	235
EFFECTS OF GROUND IMPROVEMENT ON LOW ALKALINE STABILIZER WITH RECYCLED PLASTER <i>S. Sugimoto, K. Omine and Y. Jiang</i> .....	240
FEASIBILITY OF STEEL SLAG-FLY ASH-DOLIME MIX AS A BASE COURSE MATERIAL FOR FLEXIBLE PAVEMENTS <i>S. Patel, J.T. Shahu and T.R. Naik</i> .....	245

EVALUATION OF LIGHTWEIGHT DEFLECTOMETER TESTS ON THIN SURFACE PAVEMENT BY USING MULTI-LAYER LINEAR ELASTIC ANALYSIS <i>T. Posribink, S. Youwai and W. Kongkitkul</i> .....	254
THE EFFECT OF ENVIRONMENT CHANGE ON THE STRENGTH OF CEMENT TREATED GROUND AND ITS ADJACENT GROUND <i>T. Himeno, T. Negami, R. Jia and T.Hino</i> .....	262
THE EFFECT OF WATER CONTENT REDUCTION TO FIBROUS PEAT ABSORBENT CAPACITY AND ITS BEHAVIOUR <i>F.E. Yulianto, F. Harwadi and M.K. Wardani</i> .....	266
PERFORMANCE OF WASTE QUARRY BY-PRODUCTS AS A SUPPLEMENTARY RECYCLED SUBGRADE MATERIAL <i>S. Manandhar, D. Suetsugu, H. Hara and H. Hayashi</i> .....	271

#### CHAPTER G3D: SOIL/GROUND IMPROVEMENT D

STRENGTH RESPONSE OF FLY ASH MIXED WITH PLASTIC WASTE UNDER STATIC AND DYNAMIC LOADING <i>G.L. Sivakumar Babu and R. Pratibha</i> .....	279
METHODOLOGY FOR CALCULATING THE CONSOLIDATION SETTLEMENT OF FLOATING SOIL-CEMENT COLUMN IMPROVED SOFT CLAYEY DEPOSIT <i>S. Pongsivasathit, P. Jitsuwan, J.C. Chai and T. Hino</i> .....	285
RUZI GRASS COMBINED WITH WATER HYACINTH WOVEN LIMITED LIFE GEOTEXTILES (LLGS) FOR SOIL EROSION CONTROL <i>S. Artidteang., D.T. Bergado, S. Chaiyaput and L.G. Lam</i> .....	294
APPLICATION OF 8R MAT FOR SLOPE PROTECTION AND SOIL EROSION CONTROL <i>F. Ahmad</i> .....	300
STUDY OF QUARTZ MINERAL BASED ON SMEAR SLIDES IN BILI BILI DAM OF PARANGLOE, GOWA DISTRICT OF SOUTH SULAWESI PROVINCE <i>H. Hamrullah, I. Alimuddin, H. Umar and H. Pachri</i> .....	308
PERFORMANCE OF PVDS IMPROVEMENT WITH AND WITHOUT VACUUM FOR SOFT GROUND <i>L.G. Lam, D.T. Bergado, P. Voottipruex, J. Saowapakpiboon and T. Hino</i> .....	313
CHARACTERISTICS OF WET-DRY CYCLES OF COMPACTED EXPANSIVE SOIL-FIBER MIXTURE <i>S.H. Nur, T. Harianto and A. Cakra</i> .....	318

#### CHAPTER G4: SOIL REINFORCEMENT/GEOSYNTHETICS

PERFORMANCES OF GEOSYNTHETIC REINFORCEMENT ON THE BALLASTED RAILWAY TRACK-MODEL TEST <i>L.S. Sowmiya, J.T. Shahu and K.K. Gupta</i> .....	326
GEOSYNTHETIC REINFORCED STONE COLUMNS IN SOFT SOILS: AN EXPERIMENTAL AND ANALYTICAL STUDY <i>K. Ali, J.T. Shahu and K.G. Sharma</i> .....	332
ANALYSIS OF OBLIQUE PULL IN REINFORCED SOIL WALL – COHERENT GRAVITY AND TIEBACK WEDGE METHODS <i>P.V.S.N.P. Kumar, M. R. Madhav and M. Kumar</i> .....	340

A NEW ANALYSIS OF REINFORCED SOIL WALL RESTING ON SOFT GROUND <i>S. Patra and J.T. Shahu</i> .....	348
FURTHER MODIFICATION K-STIFFNESS METHOD ON SOFT AND HARD FOUNDATIONS <i>S. Duangkhae, D.T. Bergado, J.C. Chai and T. Hino</i> .....	353
CASE STUDY OF REINFORCED UNSTABLE SLOPE IN SOFT CLAY USING MICROPILE <i>A. Arsyad, L. Samang T. Harianto, Ahmad and O. Tenta</i> .....	361
ROOT STRENGTH OF VETIVER AND RUZI GRASSES FROM IN-SITU TESTS <i>J. Manecharoen, W. Hwte, D.T. Bergado, T. Hino and N.T.N. Truc</i> .....	367

#### **CHAPTER G5: FOUNDATIONS ON IMPROVED SOILS**

EXPERIMENTAL STUDY OF SANDY CLAY REINFORCED BY GROUTED SAND COLUMN <i>L. Samang, A.B. Muhiddin, A. Arsyad, R. Abdullah and N. Dhani</i> .....	373
KINEMATICS AND BEARING CAPACITY OF STRIP FOOTING ON REINFORCED GRANULAR BED OVER SOFT GROUND STABILIZED WITH GRANULAR TRENCH <i>R. Kurapati, S.V. Abhishek and M.R. Madhav</i> .....	377
APPROPRIATENESS OF PILED RAFT FOUNDATION FOR TALL STACK-LIKE STRUCTURES IN COASTAL AREAS <i>B.R. Jayalekshmi, S.V. Jisha and R. Shivashankar</i> .....	385
PERFORMANCE OF STONE COLUMN REINFORCED SOFT CLAY UNDER CYCLIC AND STATIC LOADING <i>S. Kumar and J.T. Shahu</i> .....	393
CONSIDERATION OF INDUCED OVERCONSOLIDATION ON RESPONSE OF GRANULAR PILE REINFORCED SOFT GROUND <i>K. Suresh, M.R. Madhav and E.C. Nirmala Peter</i> .....	397
FULL-SCALE TRIAL EMBANKMENT ON SOFT SOIL REINFORCED WITH INCLINED PILE <i>Suheriyatna, L. Samang, M.W. Tjaronge and T. Harianto</i> .....	404
A FULL SCALE EXPERIMENTAL STUDY OF PILE-PVD (HYBRID PILE) REINFORCEMENT OVER SOFT SOIL <i>Y. Sandyutama, L. Samang, A.M. Imran and T. Harianto</i> .....	410

#### **CHAPTER G6: SOIL GEOHAZARD AND GEOENVIRONMENT IN LOWLANDS**

MITIGATIONS OF MULTI-HAZARDS IN LOWER CHAO PHYA RIVER BASIN, THAILAND <i>S. Soralump</i> .....	416
DEWATERING EFFECT ON SURROUNDINGS DURING DEEP EXCAVATION IN SOFT DEPOSIT OF TIANJIN, CHINA <i>Y.X. Wu, S.L. Shen and Y.S. Xu</i> .....	423
GEOTECHNICAL CHARACTERIZATION OF THE SUBSOIL PROFILE UNDERLYING THE LAND SUBSIDENCE MONITORING POINTS IN SOUTHERN VIETNAM DELTA <i>P.H. Giao, T.T. Thoang, L.X. Thuyen and N.N.N. Vu</i> .....	429
SYSTEM FOR MONITORING ADAPTATION TO CLIMATE CHANGE-INDUCED DISASTERS IN COASTAL REGIONS <i>K. Yasuhara, K. Kuwahara and D.M. Duc</i> .....	437

SEDIMENT ACCUMULATION IN THE KULEKHANI RESERVOIR DUE TO THE 1993 DEBRIS FLOWS AND LANDSLIDES <i>M.R. Dhital, S. Manandhar, T. Hino and D. Suetsugu</i> .....	443
COASTAL EROSION IN TAKALAR BEACH SOUTHERN MAKASSAR, INDONESIA <i>R. Langkoke, B. Rochmanto, J.R. Husain and M. Akbar</i> .....	451
EFFECTS OF ACID TREATMENT AGENT AND SALINITY ON TRANSPARENCY OF THE ARIAKE SEA <i>K. Tsukamoto, D. Suetsugu, S. Manandhar and H. Hara</i> .....	461
CONCURRENT BIOELECTRICITY AND GEOENVIRONMENTAL IMPROVEMENT OF ACID VOLATILE SULFIDE SEDIMENT <i>M.A. Moqsud, Y. Kanehagi and M. Hyodo</i> .....	466

## PART 2

# WATER AND ENVIRONMENTAL ENGINEERING

## COASTAL ENGINEERING

### CHAPTER W1: GROUNDWATER AND SOIL CONTAMINATION MANAGEMENT

MODELING OF SEAWATER INTRUSION REDUCED IN UNCONFINED AQUIFER WITH PHYSICAL BARRIER <i>Nurnawaty, M. Selintung, A. Thaha and F. Maricar</i> .....	471
MODELING THE EFFECT OF LEAKY SEWER ON GROUNDWATER MICROBIAL QUALITY <i>N. Seetha, G.R. Anjana and M.S. Mohan Kumar</i> .....	476
APPLICATION OF ASTAR AND RBF-NN TO PREDICT LOCATION AND MAGNITUDE OF PIPE LEAK ON WATER DISTRIBUTION NETWORK <i>A.E.U. Salam, M. Tola, M. Selintung and F. Maricar</i> .....	481
THE INFLUENCE OF GIVING LIME AND FERTILIZER TO THE WATER QUALITY OF THE ACID-SULPHATE AGRICULTURE LAND MODEL <i>A. Rusdiansyah, N. Helda and Rismawidha</i> .....	487
BIOREMEDIATION OF SOIL CONTAMINATED WITH RESIDUAL FUEL OIL BY NITRATE ADDITION <i>S. Leungprasert and M. Suknij</i> .....	492
GIS-BASED STATISTICAL ANALYSES OF DIRECT SURFACE WATER-GROUNDWATER CORRELATIONS IN THAILAND <i>A. Putthividhya, S. Jirasirilak, A. Amto and S. Petra</i> .....	496
NUMERICAL MODEL OF AN AQUIFER THERMAL ENERGY STORAGE SYSTEM WITH MULTIPLE WELLS <i>S. Ganguly and M. S. Mohan Kumar</i> .....	504

### CHAPTER W2: WASTEWATER AND WASTE MANAGEMENT

FIELD INVESTIGATION ON THE DECENTRALIZED WASTEWATER TREATMENT PLANTS CONSTRUCTED TO IMPROVE SANITATION CONDITION IN KHULNA <i>S. R. Saha and M. Alamgir</i> .....	510
--	-----

THE BENEFITS OF PADDY HUSK BRIQUETTES AS ABSORBER IN THE DISTILLATION PROCESS <i>H.U. Syarif, D.A. Suriamiharja, M. Selintung and A.W. Wahab</i> .....	518
THE INVESTIGATION OF CATIONIC DYE ADSORPTION ON THERMAL AND CHEMICAL ACTIVATED ADSORBENTS FROM WATER SUPPLY SLUDGE AND ASHES FROM BIOMASS POWER PLANT <i>S. Polruang, P. Banjerdikij and S. Sirivithayapakorn</i> .....	523
SYNTHESIS OF HYBRID ADSORBENT CONTAINING NANO-SIZE HYDROTALCITE AND ZEOLITE AND BASIC PERFORMANCE <i>M. Ohno, Y. Kobayashi, H. Suhara, S. Juengjarernnirathorn, Y. Mishima and H. Araki</i> .....	530
EVALUATION ON APPLICABILITY OF A NEW HYBRID ADSORBENT TO WATER POLLUTION CONTROL IN LOWLAND BY COMPLEX LEACHATE FROM WASTE LANDFIL SITE <i>S. Juengjarernnirathorn, M. Ohno, Y. Mishima, H. Suhara and H. Araki</i> .....	536
EFFECTS OF METAL LOADING ON THE PHOTOCATALYTIC NITRATE REDUCTION EFFICIENCIES OF TiO <sub>2</sub> CATALYST <i>K. Kobwittaya and S. Sirivithayapakorn</i> .....	543
BIOGAS PRODUCTION FROM CO-DIGESTION OF MUNICIPAL WASTEWATER AND FOOD WASTE IN BANGKOK, THAILAND <i>P. Banjerdikij, S. Polruang and S. Sirivithayapakorn</i> .....	548

### CHAPTER W3: FLOOD ANALYSIS AND MANAGEMENT

ONLINE ESTIMATION OF FLOOD DAMAGE IN THE NETHERLANDS <i>O.A.C. Hoes, M.A.U.R. Tariq and N.C. Van de Giesen</i> .....	553
A STUDY ON RIVER BASIN MANAGEMENT IN JOBARU RIVER BASIN BY COMPUTATIONAL SIMULATIONS OF FLOOD AND SEDIMENT TRANSPORT AND FIELD GEOTECHNICAL INVESTIGATIONS <i>H. Nakashima, K. Ohgushi, T. Hino, T. Morita and T. Jansen</i> .....	559
EVACUATION AND FLOOD SIMULATIONS IN THE CASE THAT SHELTERS ARE INCLUDED IN LOWLAND AREA <i>T. Morita, K. Ohgushi and A.H. Thambas</i> .....	566
DEVELOPMENT OF FLOOD ROUTING MODELS FOR YOM RIVER BASIN <i>W. Liengcharernsit, R. Charoensuk, P. Siripanaroj and P. Ruekrai</i> .....	572
PERCEPTION OF FLOOD-PRONE COMMUNITIES IN PROBLEMATIC OF FLOOD RESPONSE: CASE STUDIES IN BANGKOK AND NONTHABURI PROVINCE <i>I. Raungratanaamporn</i> .....	578
ALTERNATIVE SOLUTIONS OF FLOOD AND WASTE MANAGEMENT IN MANADO, “ECO-TOURISM” CITY <i>A.K.T. Dundu, K. Ohgushi and R.J.M. Mandagi</i> .....	586

### CHAPTER W4: PROBLEM ANALYSIS IN RIVER BASIN AND COASTAL AREA

CHANGE DETECTION OF VEGETATION USING LANDSAT IMAGERY IN MODIFIED AJKWA DEPOSITION AREA (MOD-ADA) AT FREEPORT INDONESIA LTD IN PAPUA INDONESIA <i>Y. Windusari and S.P. Sari</i> .....	593
--	-----

COMPARISON OF METHODS OF EXTRACTION OF WATER BODIES FROM META DATA <i>N. Nawaz , S. Sanaga and P.K. Rao</i> .....	597
SCOUR REDUCER MODELING BY USING CURTAIN RECTANGULAR WITH WEDGE CURVE SHAPE (RWWSC) AT PILLAR ZONA <i>Nenny, S. Pallu , A. Thaha and F. Maricar</i> .....	601
ASSESSING WADEABLE STREAMBANK STABILITY OF THE KODKU RIVER, KATHMANDU USING MORPHO-HYROLOGIC PARAMETERS AND BANK EROSION POTENTIAL <i>N.K. Tamrakar, R. Bajracharya, and S. Manandhar</i> .....	609
COASTAL VULNERABILITY BASED ON TECTONICS AND SHORELINE CHANGE ALONG COASTAL AREA OF LUMPUE COAST SOUTH SULAWESI <i>H. Sirajuddin, D.A. Suriamihardja, A.M. Imran, and M.A. Thaha</i> .....	617

### **CHAPTER W5: WATER RESOURCES AND WATER ENVIRONMENT**

POTENTIAL CONTRIBUTION OF HYDRO POWER PLANTS TO THE ENERGY CONSUMPTION OF EAST ASIAN ISLANDS <i>O.A.C. Hoes, L.J.J. Meijer, D.R. Sarfianto and R.J. Van der Endt</i> .....	622
IDENTIFICATION STUDY ON WATER MANAGEMENT SYSTEM IN LIANG POLDER, BANJAR REGENCY, SOUTH KALIMANTAN PROVINCE <i>N. Fithria, N. Helda and N. Amal</i> .....	628
WATER RESOURCES GOVERNANCE BASED ON AN INTEGRATED LAKE BASIN MANAGEMENT APPROACH <i>S. Silva, A. Bernal, M. Ortíz and G. Cuevas</i> .....	637
PREDOMINANT ALGAE IN BANG PHRA RESERVOIR: MORPHOLOGICAL AND MOLECULAR IDENTIFICATION <i>P. Suwanvitaya and S. Suwan</i> .....	646
LONG-TERM CHANGE OF SUSPENDED SOLIDS IN THE INNERMOST PART OF THE ARIAKE SEA <i>S. Nagase, N. Vongthanasunthorn , Y. Mishima, H. Araki and K. Koga</i> .....	652
THE STUDY OF CHAETOCEROS BLOOMING AND WATER QUALITY MONITORING IN CHONBURI BAY <i>P.I. Rerkrai and W. Liengcharernsit</i> .....	658
INFLUENCE OF ARTIFICIAL TRENCHES ON HABITAT IN A TIDAL AREA <i>Y. Nagahama, K. Nishimura, A. Kitsuka and H. Yamanishi</i> .....	664
THE RELATIONSHIP OF PHYSICAL ENVIRONMENT AND HYDRAULIC CONDITIONS ON FISH FAUNA <i>R. Lopa and Y. Shimatani</i> .....	670

## **PART 3 CITY/URBAN PLANNING AND MANAGEMENT**

### **CHAPTER U1: SUSTAINABILITY**

## THE INFLUENCE OF GIVING LIME AND FERTILIZER TO THE WATER QUALITY OF THE ACID-SULPHATE AGRICULTURE LAND MODEL

A. Rusdiansyah<sup>1</sup>, N. Helda<sup>2</sup> and Rismawidha<sup>3</sup>

**ABSTRACT:** Low pH and pyrite layer are the most frequent problems found in the acid sulphate land. It can be found in many lowland regions in South Kalimantan Province i.e Barito Kuala Regency. The value of pH, iron (Fe) and sulphate (SO<sub>4</sub>)<sup>2-</sup> concentration for the case study in Barito Kuala Regency were about 4.00, 8.40 mg/l and 2100.00 mg/l respectively. This study is done to learn more about the influence of pH, Fe and sulphate concentration before and after conducting amelioration treatment and which will be the best dosage for lowering the acidity of acid sulphate land. The research was done in the green house with the agriculture land model using acid sulphate soil. There were some variations of lime dosages i.e. 24 gram, 36 gram, 48 gram, 60 gram and 72 gram, respectively. One box was left without any treatment as a control. Fertilizing dosages were 6.00 gram of Urea, 3.24 gram of SP36 and 2.40 gram of KCl. The water height was maintained 5 cm above the soil surface. From the result, it was indicated that by giving lime (as ameliorant), it can improve the water quality significantly. The pH values changed from 4.00 to 5.50. Fe concentration has decreased from 8.40 mg/l to 0.64 mg/l. Sulphate concentration also has decreased from 2100.00 mg/l to 1401.00 mg/l. From Duncan Multiple Range Test (DMRT), it was determined that by giving 48 gram of ameliorant can improve water quality significantly.

**Keywords:** pH, iron (Fe), sulphate, acid-sulphate agriculture land

### INTRODUCTION

Recently, the agriculture land in Barito Kuala Regency, South Kalimantan Province, has been decreased continuously and it influenced the food productivity. Many efforts have to be done to solve the problem, such as the optimum use of acid-sulphate agriculture land (Khairullah et al. 2011). Frequently, the problems found in acid-sulphate agriculture land are low pH, pyrite layer existence and minimum mineral elements. The occurrence of pyrite oxidation will produce H<sup>+</sup> ion and SO<sub>4</sub><sup>2-</sup> ion which will increase the iron (Fe<sup>2+</sup>) solubility. In stagnant condition, the acidity of soil can be lessened, however the iron (Fe<sup>2+</sup>) poisoned occurs; and also Al, Mn, H<sub>2</sub>S, CO<sub>2</sub> and organic acids poisoned (Suriadikarta dan Setyorin 2006 in DEPTAN 2006). The iron poisoned can be prevented by managing soil and water by using variety of plants and fertilizer and also amelioration treatment (Khairullah et al. 2011).

In Barito Kuala Regency, South Kalimantan Province, to protect plants from iron poisoned, the farmers use

lime and also fertilizer to increase the soil mineral elements. The amelioration treatment has to be conducted before giving fertilizer to the plants. Giving fertilizer before amelioration treatment will not be effective and end with no significant result (Balai Besar Penelitian dan Pengembangan Sumberdaya Lahan Pertanian 2006).

Dolomite is used extensively for acid sulphate land. It consists of 40% Calcium Oxide and 18-22% Magnesium Oxide. Not only to increase the pH values, Lime is also used as the soil buffer so that the acidity is in stable condition (Lingga dan Marsono 2007). The dosage of giving fertilizer should correspond to the soil minerals status. The dolomite dosage of 1000-3000 kg/ha is recommended for fertilizing acid-sulphate land (Masganti 2009). Urea fertilizer of 250 kg/ha is distributed for 3 times as follows: (i) planting time, (ii) 4 weeks after planting time and (iii) 7 weeks after planting time. SP36 of 135 kg/ha and KCl of 100 kg/ha are all given at planting time (Suastika et al.; Badan Penelitian dan Pengembangan Pertanian 1997).

The dosage of lime for every meter of the land can be calculated as follows:

$$\text{dosage} = \frac{\text{lime dosage}}{10000\text{m}^2} \quad (1)$$

For Indonesian condition, fertilizing application is recommended to be given at the same time (constant time). The first fertilizing is given 14 days before planting, the second is 23-28 days after planting and the third is 38-42 days after planting respectively (DEPTAN 2007).

OBJECTIVES

The study was conducted in order to:

- (a) To identify the influence of water quality parameters (pH, Fe and sulphate concentration) before and after conducting amelioration treatment.
- (b) To determine the best dosage for lowering the acidity of acid sulphate land.

METHODOLOGY

Location and Time of Study

The study was conducted in laboratory scale, in green house of Lambung Mangkurat University with the agriculture land model using acid sulphate soil. The study was carried out during May – September 2012. The soil and water sample were taken from Puntik Tengah Village, Barito Kuala Regency, South Kalimantan Province, Indonesia.

Methods of Study

The study was carried out with the agriculture land model using acid sulphate soil. There were some variations of lime dosages i.e. 24 gram, 36 gram, 48 gram, 60 gram and 72 gram, respectively. One box was left without any treatment as a control. Fertilizing dosages were 6.00 gram of Urea, 3.24 gram of SP36 and 2.40 gram of KCl. The water height was maintained 5 cm above the soil surface.

Amelioration treatment was done two (2) weeks before planting and fertilizing treatment was conducted by following the constant time method. The first fertilizing is given 0 days before planting, the second is 28 days after planting and the third is 42 days after planting respectively. The first fertilizing used one third of Urea and all SP36 and KCl. The second and the third fertilizing used the rest of Urea. Water sample was taken before fertilizing.

Data Analyses used to identify the influence of amelioration and fertilizing treatment was a complete random design (RAL= Rancangan Acak Lengkap faktorial). Then, it is followed by Duncan Multiple Range Test (DMRT).

RESULTS AND DISCUSSIONS

Amelioration treatment especially giving lime and fertilizing can improve the water quality of acil-sulphate agriculture land. The changes of water quality parameters (pH, Fe and sulphate concentration) are presented in the following graphs (Figs. 1, 2, 3 and 4).

Based on Fig. 1, it can be concluded that the higher the lime and fertilizer dosages given, the higher the pH

Fig. 1 The water quality changes for pH

values. The pH values range from 4.5 to 5.35. This result shows that the water sample after treatment becomes good and can be used for agriculture land.

Dolomite is known to be an agent to rise the pH values because of its base characteristics and capable of neutralizing poisoned ion such as  $\text{SO}_4^{2-}$ . The pH values after fertilizing treatment show no significant increase. The base characteristics of Urea were not give big influence to raise the pH values. Therefore, amelioration treatment should be done to improve the quality of the soil.

Stagnant condition resulted high pH caused by  $\text{H}^+$  ion consumption by Al, formed molecule of  $\text{Al}(\text{OH})_3$ , then  $\text{AlPO}_4$  released P. The higher values of pH were also caused by  $\text{OH}^-$  ion was released resulted from the changes of  $\text{Fe}^{2+}$  to  $\text{Fe}^{3+}$ . The changes of Fe concentration is presented in Fig. 2 below.

As shown in Fig. 2, it can be explained that after amelioration treatment for 100 days after planting, the Fe concentration ranges from 0.52 – 0.31 mg/l. This result indicates that the treatment with some stages capable of improving the water quality, so that iron poisoned could be prevented.

The decrease of Fe concentration has correlation with the decrease of Fe solubility caused by the raise of pH values. The next Fig. 3 describes the relationship between pH and Fe solubility.

From Fig. 3, it is shown that Fe concentration has reverse condition with pH values. The lower the Fe concentration, the higher the pH values. Amelioration treatment by giving lime increased the pH values so that Fe concentration decreased.

Fig. 2 The changes of Fe concentration

Fig. 3 The relationship between pH values and Fe solubility

Fig. 4 The changes of sulphate concentration for different treatment

The changes of sulphate concentration is presented in Fig. 4. From Fig. 4, it can be explained that sulphate concentrations were not stable. The decrease of sulphate concentration was caused by giving ameliorant i.e. Dolomite ( $\text{CaCO}_3\text{MgCO}_3$ ) so that  $\text{SO}_4^{2-}$  would form deposits of insoluble  $\text{CaSO}_4$  and  $\text{MgSO}_4$ .

The addition of Urea fertilizer will influence ( $\text{NO}_3^-$ ) which soluble in water. The decomposition of Urea which was further oxidized, would produce Nitrate. These would cause  $\text{NO}_3^-$  and  $\text{Fe}^{2+}$  ions react with  $\text{H}_2\text{SO}_4$  to form  $\text{Fe}^{3+}$  and  $\text{SO}_4^{2-}$  ions, also Nitrogen Oxide gas. This condition made  $\text{SO}_4^{2-}$  to increase.

The result of variety analysis shows that there is real influence for the treatment and the time of water sample taken (Table 1.) and the influence between water quality and time (Table 2).

Based on Table 1, it can be concluded that by giving 48 grams of lime and fertilizer, the water quality can be improved. Table 1 shows the rank of ameliorant and fertilizer dosages based on the lowest Fe concentration after treatment.

Therefore, the highest rank is the lowest Fe concentration. The numbers which were followed by the same letters are indifferent real based on DMRT 0.05. As conclusion, to determine the best dosage of ameliorant and fertilizer it can be assumed that it is the dosage with the highest rank which has the lowest Fe concentration.

From Table 2, it can described that time of water sample was taken with the best result is day-0 after planting. According to DMRT 0.05, day-0 after planting occupies the first place of the rank.

Based on statistical analysis, by giving ameliorant, it has given the influence to the water quality. The test result indicates that at day-0 after planting showed that

pH values tend to increase with significant decrease of Fe and  $\text{SO}_4^{2-}$  concentration. However, after the next treatment by giving fertilizer of Urea, SP36 and KCl, the decrease of Fe concentration was not significant. This was caused by Phosphate solubilization that reduces  $\text{Fe}^{3+}$  to become  $\text{Fe}^{2+}$ . Therefore the element of Phosphorus (P) would reduce. The increase of sulphate concentration after giving fertilizer predominantly was caused by the decomposition of Urea. If it is further oxidized, it would produce Nitrate. These would cause  $\text{NO}_3^-$  and  $\text{Fe}^{2+}$  ions react with  $\text{H}_2\text{SO}_4$  to form  $\text{Fe}^{3+}$  and  $\text{SO}_4^{2-}$  ions, also Nitrogen Oxide gas. This condition made  $\text{SO}_4^{2-}$  to increase.

Table 1 The influence of giving lime and fertilizer for water quality parameters

Giving Ameliorant and Fertilizer (Treatment)	Subset
Lime 48 grams + Fertilizer	443.6617a
Lime 72 grams + Fertilizer	454.4558a
Lime 36 grams + Fertilizer	477.4438a
Lime 60 grams + Fertilizer	511.4062a
Lime 24 grams + Fertilizer	557.0492a
Control	696.4767b

Table 2 The influence of water quality to time of water sample was taken

Time of water sample was taken (Days after Planting / DAP)	Subset
0	434.5044a
28	515.9797ab
42	566.9583b
100	576.2197b

## CONCLUSIONS

Based on the study results, it can be concluded as follows:

1. The water quality parameters (pH, Fe and sulphate concentration) on tidal agriculture land, before and after treatment were experienced changes such as: the pH values raised from 4.00-5.50, Fe concentration were declined from 8.40 mg/l to 0.64 mg/l, and sulphate concentration were decreased from 2100 mg/l menjadi 1401 mg/l. The decrease of Fe and sulphate concentration were caused by giving ameliorant which was Dolomite ( $\text{CaCO}_3\text{MgCO}_3$ ). It raised the pH values which made  $\text{Fe}^{2+}$  and  $\text{SO}_4^{2-}$  solubility tend to decline. The fertilizing treatment was capable of reducing plant sensitivity of iron poisoned.

2. Based on statistical analysis, the 48 grams of ameliorant (lime) was the best dosage which occupied the first rank.
