The wuc of Cuth;inu,;, ...i..., ,...c,d from the UfICd of mmlliII law ar,d human nghu: in Indonesia

is still caused by conditions "emphasizing the provision of human rights and the contradiction of regional [and] especially the Criminal Code, which is applied in Indonesia. Generally, euthanasia is still prohibited in the criminal law system or health law in Indonesia. No man has the right to request it directly. Only for the case of KKN or the KHN "to request euthanasia for the family members" all will form a committee."

Ecumenical groups made, of course, to pros and cons. In addition to Sooth Khantin has been mentioned that many theologians. Mom, ff. ... , he gave an impact to the community case "Wty Sludmills" , the family members "to ouliff & from chronic illness "hole them: I desire of family members to choose euthanasia as follows: "You of pain.

According to it has been mentioned in education that education - in achieving the main role of morality is related to moral feelings that ... related to prohibitions and choices. It will speak incorrectly or correctly.

Marta, Hofma, rompkmtnt of PIlg and Kohlbeck, by paying the attention to the role of cognitive abilities and reasoning skills in explaining mental behavior, too Hoffman argues that empirical methods of education called empirical. Cognitive abilities of learners themselves are empathetic, di,ress that a person can and can a COffit. Empathetic abilities develop in a person's mind through learning. Thus all stages of moral development proposed by Piaget and Kohlberg can be described and described in students."

But still on the other hand studies on moral development have not been carried out in theology or, more specifically, in field. Moan, etc. In addition to the call to be separated from illnesses due to God's power and good morals, i.e., life disease and life treatments. Biology also has how to behave towards our kind and others. Theology stills these issues - thou! palromzmg obtained consciously by students through a process. So that we can make the point, i.e., the situation that information.

This problem was never been mentioned before. For example, in dilemma ... , in the DSHC of euthanasia is expected to produce a moral norm of protection of students about euthanasia. However, also, it can contribute

biology study in Junio High School level in Jayapura City involved in research until a study of law and human rights up to \$.

The purpose of this study ... en produce an overview of the moral development of Junior High School students in the problem of euthanasia through problem solving.

Method

This research is qualitative research and descriptive. The aim is to describe the stages of students' moral development for each stage through, among them, the problem of euthanasia.

Design: This study uses case study design. It is conducted by Levy, Molenda, R. Weller and Smael, no. Broadly speaking, this study is aimed at understanding the stages of students' moral development for each stage through, among them, the problem of euthanasia.

The second part is designing data collection instruments and products. In addition to instruments, folk, ... , by experience, readability test and student.

Instrument: The developing instruments include Ddining b''' Tigt (DIT), ... , adapted from Rest (1999). This study modified by "III" a moral dilemma discussion on the problem of euthanasia. Dikko related to content-biology learning material that has been taught by the teacher is Addictive and Psychotropic Substances.

Measures: The subject of the study consisted of learning experiences and educational practice on the meaning of the human being. The results of the study came from VII grade students of junior high school. The minimum of research subjects came from class 8th junior high school, ... , the consideration! If it is subcels "at" formal level "able to think" absinately, b) mental development of subcels is tended to be more rigid, ... , than older children, c) maturing, ... , about various organs, ... , in human, chemicals in the body of food, ... , water, ... , button studied by students on grade 7th III the first, ... , material.

Fig. 1: Readability Test

Data Analysis Techniques: Analysis of data from DIT, validation, and guidelines "a," earned all based on Table 2. The result of validation from the validator or expert if the research instrument was declared valid, then the research

instrument is feasible to use based on the validator's suggestion. Readability test analysis activities carried

out by identifying research instruments that are not well understood by students, then make revision, based on the result of the validation, then

Table 1: Assessment Criteria

No.	Validation Criteria	Validity Level
1	4 < P < 5	VeryorthyValid
2	J < P < 4	Di:centValid
3	2 < P < J	Middle
4	1 < P < 2	Invalid

Calculation of the reliability of the assessment instrument, uses the following formula

$$R = \frac{D}{A} \times 100\%$$

Explanation:

R - Instrument Reliability (pening, agree)

A - Frequency of matching between the two assessors (agree)

D - Frequency of discrepancy between the two assessors (disagree)

Device assessment instruments are said to be reliable if the reliability score is 75%.

Reliable and Discrepancy

1. Result of Initial Validation TPM2: Validation of the draft stage of moral development the problem of euthanasia to

expert, to find out the validity of the content and the theoretical constructs developed. Content and construct validity is obtained through the assessment of experts. Assessment is given through a validation sheet with a suggestion/comment column. The results obtained and the summary are presented in Figure 2 and Table 1.

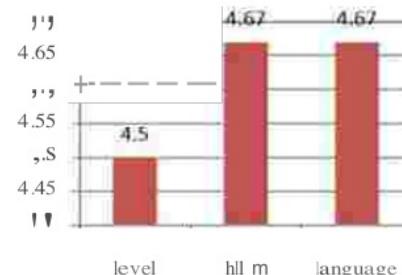

Fig. 2: Graph of Validation Results TPM2E

The results of the validation carried out by the expert obtained an average score for the stage assessment aspects as much as 4.50 (very valid). for the content aspect getting a score 4.67 (very valid), and language assessment aspects getting score 4.67 (very valid). Overall average results obtained for TPM2E based on the expert validation test amounted to 4.61 with a very valid category.

Based on the results, of the validation carried out by the expert, the average score for the stage assessment aspect was 4.50 (very valid). The content aspect got a score of 4.67 (very valid) and the language assessment aspect got a score of 4.67 (very valid). The overall average results obtained from this TPM2E based on the expert validation test amounted to 4.61 with a very valid category. The results of the validation indicate that TPM2E and the theory, compiled theoretically are valid. It means that stages and theories are in accordance with what is revealed, and the researchers' model is consistent with stage is acceptable. This is consistent with the opinion of Rest (1980) that some researchers have tried to develop new methods to denounce someone's moral development. The moral that held and believed by a person does not run stagnant but

The results of this assessment indicate that TPM2E and the theory, compiled theoretically are valid. It means that stages and theories are in accordance with what is revealed, and the researchers' model is consistent with stage is acceptable. This is consistent with the opinion of Rest (1980) that some researchers have tried to develop new methods to denounce someone's moral development. The moral that held and believed by a person does not run stagnant but

obtained from the written assignments based on the expert judgment test are 4.81 with a validity and category of 98.13% reliability.

The results of the assessment indicate that the written assignments arranged theoretically are very valid, meaning that the written assignments are in accordance with the mind of the researcher to reconstruct written assignments that are interpretable. Thus the content, difficulty and robustness of the theory is significantly fulfilling if can be implemented and applied in the field.

Conclusion

- Content, validity and hypothetical robustness theory of Moral Development of Euthanasia Problem, already fulfilled and can be applied in the field

b. Vahadon test of 4.81 with a validity of 98.13%, the written assignments arranged theoretically are very valid, meaning they can be implemented and applied in the field.
