We appreciate due to the disruption caused by the COVID-19 virus that you may have difficulty in meeting the timeline for peer review. Please let us know if you need additional time to complete the review. Our systems will continue to send reminders.

Note: your peer-reviewer comments can only be submitted via the 'Agree to Review' option below. We can not accept your comments within the author's manuscript file(s).

You should consider the [COPE Ethical Guidelines for Peer Reviewers](#) before accepting to review a paper and throughout the review process

Title: Extent of received antenatal care components in Ethiopia: a community-based panel study

Article type: Original Research

Status: ACCEPTED TO REVIEW

Due Date: **17/Jul/2021**

Action: [Review Evaluation Form](#)

Peer-review comments can only be accepted online via our reviewer evaluation form.

We provide a structured peer review form which guides you through the important points for consideration when evaluating a manuscript. This helps our peer reviewers to write an informed review of the paper to justify their recommendation as to whether it should be accepted for publication.

- o Your peer review should provide an objective critical evaluation on the technical aspects of the paper.
- o Your report must contain a recommendation and a description of your reasons for that

Title of paper: Extent of received antenatal care components in Ethiopia: a community-based panel study

Reviewed by: Dr Anggraini on 26 July 2021

Title & Abstract

1. Do the title and abstract cover the main aspect of the work?

Yes, but they need to sharpen the conclusion and the practical implementation to reduce factors contributed to the low proportion of received ANC contents in Ethiopia.

Introduction

2. Does the introduction provide background and information relevant to the study?

Yes, the introduction provides background about the importance of ANC to monitor pregnancy and reduce neonatal mortality, stillbirths, and maternal mortality. The study also provides the information regarding the adequate use of ANC, the coverage level of ANC contents, and factors associated with the utilization of ANC.

Material and Methods

3. Are the methods clear and replicable? Do all the results presented match the methods described?

Yes, the methods are clear and replicable. However, the procedure/data analysis of sampling weight should be more specific. The presented results also match with the describing methods.

Results

4. If relevant are the results novel? Does the study provide an advance in the field? Is the data plausible?

The results are good but those can be improved or novel if the authors can further show on how to improve the low proportion of ANC coverage in terms of contents or quality in the next study.

Discussion

5. Do the findings described by the author correlate with the results? Are the findings relevant?

Yes, the findings correlate with the results and are compared with other relevant studies.

Conclusion

6. Do the conclusions correlate to the results found?

Yes, the conclusions correlate to the results.

Figures & Tables

7. If the author has provided figures and tables are the figures and tables clear and legible? Are the figures free from unnecessary modification?

The legend of Figure 1 needs to be more readable.

Do not need a label of Figure 1 on the top just the legend is more than enough.

The author can make Y axis on Figure 1 like it is in Figure 2, just to make it simple.

The legend of Figure 2 should be written as "Number of received ANC contents" and then do not need to put the label "Number of receive ANC contents" on the top. This makes confusion in reading Figure 2.

Please clear the gridlines on each figure to make it simple.

8. Does the paper raise any concerns?

The paper does not raise any concerns. The statistical analysis is appropriate to the research. The references are relevant to the study but need to be corrected and more consistent in the writing style. I do not have concerns regarding similarities to other articles published by the same authors.

Competing interest

9. Do any of the authors' competing interests raise concerns about the validity of the study i.e. have the authors' competing interests created a bias in the reporting of the results and conclusions?

No, they do not.

English editing

10. Do you think the manuscript requires English editing to correct the grammar or flow?

Yes

Recommendations to the Editor

11. Recommendations to Editors

Satisfactory

12. Would you be willing to review a revision of this manuscript?

Yes
