The role of ursodeoxycholic acid and phenobarbital in a child with cholestasis: a longitudinal study

Introduction :
In this case report the aim was not clear and precise
This study aims to shows that ursodeoxycholic acid (UDCA) and phenobarbital are effective in cholestasis management.

Case presentation:

- A 28-days-old boy with 3.1 kg and length 51 cm. Anthropometric measurements should be plotted on centile curves for follow up assessments.
- Investigations done for diagnosis the case and its cause early before any treatment given i.e. blood culture for sepsis diagnosis. Also iron deficiency anemia assessment Ferritin and TIBC
- Mentzer index not mentioned in evaluation in spite put in the discussion.
- Follow up of clinical conditions of the child i.e weight and height other parameters of growth evaluations

Recommendation: Revisions Required
