To: Rabiatul Adawiah <rabiatuladawiah@ulm.ac.id>

Rabiatul Adawiah:

The paper "Strategic orientation and technology entrepreneurship: The mediating role of pro- environment behavior and the moderating role of intercultural communication among Indonesian Wetland Ecological Citizen" has been preliminarily reviewed.

Reviewers have given their comments on your paper. Please do the following when you resubmit your revised version:

- (i) All corrections as per the reviewers' comments and prepare a table/response letter showing corrections done. Your corrections will not be accepted in the absence of this response letter/table.
- (ii) All authors' names, emails and affiliations checked and corrected
- (iii) Add ORCID IDs of all authors

Please ensure the submission of the revision within 1 month of receiving this mail either both as a reply to this mail and in the online system.

The paper can be resubmitted for a review after huge improvements, and this does not guarantee it will be approved.

If you have any questions, please contact me. Thank you for considering this journal as a venue for your work.

Reviewer 1

The study "Strategic Orientation and technology entrepreneurship: The mediating role of pro- environment behavior and the moderating role of intercultural communication among Indonesian Wetland Ecological Citizens" provides an overview of the study's purpose, methodology, and key findings. However, there are several areas where improvements can be made to enhance clarity and provide more specific information. Here are some critical points to consider:

1. The study lacks a clear and focused research objective. It is essential to clearly state the main objective or research question that the study aims to address. While the study mentions examining the relationship between strategic orientations and technology entrepreneurship, it does not explicitly state the overall research objective.
2. The study could benefit from a brief explanation of the Indonesian Wetland Ecological Citizen sector and its significance. Providing some context about the industry or sector being studied would help readers understand the specific focus of the research and its implications.
3. The study mentions using structural equation modeling with AMOS to test hypotheses but does not provide any details about the hypotheses themselves. It would be helpful to include a brief summary of the specific hypotheses being tested, which would give readers a better understanding of the research framework.

4. The study states that pro-environmental behavior mediates the relationship between strategic orientations and

SME performance but does not explain the nature of this mediation. It would be beneficial to provide a brief explanation of how pro-environmental behavior acts as a mediator and why it is important in the context of the study.

5. The study mentions the contribution of the research to understanding the importance of environmental and cultural elements in technology entrepreneurship and strategic decision-making. However, it does not elaborate on these contributions. Providing a summary of the key insights or findings related to environmental and cultural elements would help readers grasp the significance of the research.

Reviewer 2

This study intends to evaluate the impact of entrepreneurial attitude orientation, social capital, and self-efficacy on vocational high school students' entrepreneurial intentions. Three hundred seventeen students from five public vocational high schools in Surabaya, Indonesia, participated in this study. The research model is evaluated by structural equation modeling (SEM). The findings of this study indicate that entrepreneurial orientation and self-efficacy impact the entrepreneurial intentions of vocational high school students. Meanwhile, social capital did not impact students' entrepreneurial inclinations. Moreover, entrepreneurial self-efficacy influences the impacts of entrepreneurial attitude orientation and social capital on the entrepreneurial intents of students. The findings of this study have substantial significance for vocational education practitioners seeking to foster entrepreneurial aspirations among secondary vocational students. The topic of this research is interesting and relevant. The manuscript is overall well-structured. However, various areas need improvement, which is mentioned in the coming sections in detail.

- The manuscript highlights the importance of strategic orientations, pro-environmental behavior, and intercultural communication in the success of small and medium-sized enterprises (SMEs) in the Indonesian Wetland Ecological Citizen sector. It also mentions the use of structural equation modeling to test hypotheses and the contribution of the research to understanding environmental and cultural elements in technology entrepreneurship and strategic decision-making. However, there are a few areas where the manuscript can be improved. By addressing these points, the manuscript can become more concise, informative, and engaging, providing a better overview of the study and its significance.
- The manuscript could benefit from a more concise and focused presentation. Some sentences are lengthy and contain excessive information, which may make it harder for readers to grasp the main points.
- The literature is generally clear and well-structured. Each section is appropriately labeled, and the hypotheses are clearly stated. However, some parts could benefit from improved sentence structure and grammar to enhance readability and comprehension. The hypotheses must be logically derived from the literature review and theoretical framework. Each hypothesis must be succinctly stated and corresponds to the specific constructs being examined. Hence, it would be beneficial to provide a more detailed justification or explanation for each hypothesis, linking it explicitly to the relevant literature.
- The moderation results are briefly mentioned, but it would be helpful to provide a more detailed explanation of the moderation analysis. Clarify how the intercultural communication of documentary moderates the relationship between PEB and TBS. Present the results in a clear and understandable manner, including the interaction effect and its significance level.
- The manuscript should provide the details of the methodology used, including the sample size and data analysis techniques. This would give readers an idea of the study's rigor and validity.
- The authors should also highlight the practical implications of the study's findings for SMEs, policymakers, and stakeholders in the Indonesian Wetland Ecological Citizen sector. This would help readers understand the potential real-world impact of the research.

To: Rabiatal Adawiah <rabiataladawiah@ulm.ac.id>

Rabiatal Adawiah:

The paper "Strategic Orientation and technology entrepreneurship: The mediating role of pro- environment behavior and the moderating role of intercultural communication among Indonesian Wetland Ecological Citizen" has been reviewed again.

1. The authors have presented the implications of the findings for policymakers and stakeholders but does not specify what those implications are. It would be valuable to briefly outline the practical implications of the research and how policymakers and stakeholders can benefit from the findings.
2. The manuscript still lacks a conclusion or summary statement. Including a concluding sentence or two that highlights the main findings and their broader implications would provide a more comprehensive ending to the abstract.
3. The methodology section provides an overview of the research design and data collection process. However, there are several areas where the section can be improved and clarified. Here are some critical points to consider:

The paper can be resubmitted for review after huge improvements, and this does not guarantee it will be approved.

If you have any questions, please contact me. Thank you for considering this journal as a venue for your work.

To: Rabiatul Adawiah <rabiatuladawiah@ulm.ac.id>

Rabiatul Adawiah:

Congratulations!

Your paper entitled, "Strategic orientation and technology entrepreneurship: The mediating role of pro-environment behavior and the moderating role of intercultural communication among Indonesian Wetland Ecological Citizen" has been accepted for publication in Eurasian Journal of Educational Research (Vol. 101, 2022).

Thank you for your interest in our journal. Your Journal paper would be indexed in Scopus (Elsevier), Google Scholar, Scirus, GetCited, Scribd, so on.

We look forward to receiving your subsequent research papers.
