Dear editor Bali Medical Journal

Revision of submission

5. Limitation :

- Limitations of this study were a retrospective study, there was no follow-up to patients who can provide oa overview of disease progression and evaluation of treatment.
- This study just only uses two parameters which are endoscopic and histological parameters. In ulcerative colitis, the number of parameters used is directly proportional to the accuracy in assessing the inflammatory profile and disease severity, such as epidemiological, clinical factors, the examination of Fecal Calprotectin, and Neutrophil-Lymphocyte Ratio

6. Several limitation are missing in the methods section:

2.1 Patient and study design

We conducted a retrospective data analysis with a total sampling from January 2017 to March 2022. 68 samples with criteria has two examination of colonoscopic and histologic data which performed in Ulin General Hospital. It is the form of electronic data from colonoscopy results and histological samples of patients with ulcerative colitis. This study used a cross sectional study.

2.2 Endoscopic and histologic assessment

The Mayo Endoscopic Score is an endoscopy index to assess inflammation on the surface of the colon. This assessment has a subscore of 0 = Normal, Score 1 = Mild (mild erythema or decreased vascular pattern), score 2 = Moderate (erythema, absence of vascular pattern fragility and erosion), score 3 = Severe (spontaneous bleeding and ulceration). This assessment is divided into subgroups Low MES = score 0-1 and High MES = score 2-3. Histology assessment uses 2 scores, the Nancy Score Index and the Geboes Score Index. Histological assessment based on the infiltration of lymphocytes and neutrophils, involvement of crypts, ulceration, and granulation. Each subscore is in the table of patient characteristics.

7. What is the 95% CI of OR :

Based on the relationship table, it was found that there was a positive significant relationship between endoscopic scoring and histology scoring with a 95% confidence interval, i.e. an increase in the MES score was significantly associated with an increase in the Nancy Score Index score by 3.272 times (OR), while in the MES with the Geboes Score Index by 1.347 times (OR)

Revision Required [BaliMedJ] [Manuscript ID: 3766]

To: Hendy Buana Vijaya, Agung Ary Wibowo

29 September 2022 20:53

Dear Authors,

Thank you for submitting your article entitled: "**Mayo Endoscopic Score (MES) as a reference for histological active disease of ulcerative colitis**".

Based on our author guidelines, Your article fulfilled the minimal required structure,

<https://www.balimedicaljournal.org/index.php/bmj/pages/view/authorguidelines>

In order to have a better-structured article, we suggest you edit based on a checklist, the simplest way, you may use the Publons review checklist.

According to the new International regulation, please fulfill the requirements below:

1. Ethical clearance number/statement (author statement) and/or informed consent at the end of the manuscript (**Confirmed**).
2. Please state your conflict of interest in the paper. (**Confirmed**)
3. Please state the funding (if any) in your paper. (**Confirmed**)
4. Please state each author's contribution. (**Confirmed**)
5. What is the limitation of this case study? Please provide the missing details following the discussion section.
6. Several informations are missing in the methods section such as: the definition and variables of MES, other variables assessed in this study, sampling technique (e.g consecutive, purposive, etc), research design (e.g Cross-Sectional, Case-Control, etc), number of samples, as well as inclusion and exclusion criteria. Consider fixing those issues in the methods section.
7. What is the 95%CI of Odds Ratio used in Table 2? Please determine your answer in the results section.

Please revise your article with the missing details, and send it back to us in **7 days (October 6th, 2022)**.In addition, I do need to remind you that Bali Medical Journal is free to submit and Open Access for our readers. However, if your manuscript is accepted for publication, as the author, you will be charged **1,000 USD for APC (not included proofreading)**. Please confirm if you agree with this information.

Thank you for trusting us with your hard work

Warm regards,

Editorial Board Member

Dear Authors,

We would like to inform you that the revised version of the manuscript entitled "**Mayo Endoscopic Score (MES) as a reference for histological active disease of ulcerative colitis [Manuscript ID: 3766]**" has been well received.

Final Decision: **Accepted with minor revision**

The article publishing charge is now payable before the paper can be progressed any further and an invoice is accessible here (**Attachment**) (**Valid until: October 10th, 2022**).

The acceptance of your paper is subject to all outstanding content-related queries being addressed to the satisfaction of the Publisher.

If you have any questions about your paper please contact us at any time, we welcome your feedback.

Yours sincerely

Editorial Board Member

*Corresponding author: agung.wibowo@ulm.ac.id

I am very excited to accept your paper entitled:

"Mayo Endoscopic Score (MES) as a reference for histological active disease of ulcerative colitis."

Your paper will be published in the issue of Vol. 11 Number 3, 2022. <http://dx.doi.org/10.15562/bmj.v11i3.3766>

(Online Link: <http://balimedicaljournal.org/index.php/bmj/article/view/3766>).

And it usually takes 2 to 4 months for your journal to show up at Google Scholar, but if you need it fast, you may add it up manually using your google scholar account. The CrossRef and DOI number usually activate in 3 until 6 months.

Bali Medical Journal is indexed in Web of Sciences, Scopus, and many other indexing organization: <http://balimedicaljournal.org/index.php/bmj/pages/view/indexing>.

Please do not hesitate to contact us if you need anything. It has been a pleasure for us to proofread and edit your work, and we are looking forward to your colleagues and your other papers in the near future.
