Title and Abstract

Title: Keterkaitan Kualitas Air dengan Ketersediaan Kompleksitas di Sungai Danau Ekosistem Mangrove Kabupaten Banta Regali

Abstract: The relationship in Banta Regali is determined by diversity of zooplankton, in relation to the primary food chain complex. One of the indicators that show in the quality of general key parameters in waters are no longer suitable for zooplankton and the fish. The purpose of this research were: (a) analyze the key parameters of water quality at the sampling location (b) determine the relationship between key water quality parameters and zooplankton density at the Banta Regali sampling location. The method used was a purposive sampling number method and the observation method. The results showed that the key parameters that are the pH No. 202021 Water Quality Standard for Class 2 River Water Quality.
