To: Roselina Panghiyangani <rpanghiyangani@ulm.ac.id>, Juliyatin Putri Utami <juliyatin.utami@ulm.ac.id>

Roselina Panghiyangani, Juliyatin Putri Utami:

We have reached a decision regarding your submission to The Review of Diabetic Studies , "Anti-diabetic and Anti-obesity Effects of Citrus amblycarpa Hassk. Peels Extract in High Fat Diet Rats Model".

Our decision is: Revisions Required

Reviewer A:**OVERVIEW:**

This manuscript investigates Citrus amblycarpa Hassk. Peel Extract's Anti-diabetic and Anti-Obesity Properties in High-Fat Diet Rat Model. This study successfully concluded that for six weeks, HFD rats receiving CAPE supplementation showed reductions in BGL, adipocyte cell size, leptin, and ghrelin expression

CONTRIBUTION TO FIELD:

The research is well-written and scientifically sound. The manuscript follows a well developed framework with proper up-to-date in-text citations and references. The results of this investigation can be extended and applied to achieve improved health outcomes.

SUGGESTIONS:

To further enhance the quality of their article, the writers should please take into account the following propositions:

- 1.It is recommended to summarize assessment of risk of bias and how it was minimized.
- 2.Briefly point out the strengths of your study.
- 3.It would be appreciated if CONCLUSION is put separately under this heading.
- 4.The study has been expertly written overall. However, as was already noted, it requires a few changes. Additionally, proofreading is essential for eliminating little errors. The article can be published in the journal once the proposed changes are made because it is closely pertinent to it.

Recommendation: Revisions Required
